

# Setting up HYPERTERMINAL (Version 4.0 or earlier) in Windows 95 to access Hawaii Information Service through Courtesy Accounts

1. Go to the **START** button on the bottom left of the screen.
2. Drag the cursor to **PROGRAMS** to **ACCESSORIES** to **HYPERTERMINAL**.
3. In the open Hyperterminal window, select the icon with **Hyperterminal.EXE** (noted in upper lower case letters). A window will pop up.
4. Enter the “name” of the ENTRY, we suggest naming it **TMK or MLS HAWAII**, then click **OK**. The next screen will request a dialup number, enter as applicable:

Oahu	441-0001	Maui	442-0001
Big Island	934-9058 / 443-0001	Kauai	246-2800
5. The next window, select the **MODIFY** box, then select **CONFIGURE**, then select **CONNECTIONS**.
6. Enter these parameters in the “CONNECTIONS” screen: **8** data bits, **NONE** parity, **1** Stop Bit...then click **OK**.
7. As you click the **OK** buttons, you will be closing or “reversing” out of screens. When you reach the **TMK Properties screen** , click the **SETTING** tab and change the Emulation to **VT100**, then click **OK**.
8. You should be on the **CONNECT** screen. Your options will include **DIAL**.
9. Before you hit the **DIAL** key, select **CANCEL**, then go to **FILE and SAVE**, to save all of the above configurations. Then, click **FILE** and **EXIT**.
10. At this point all you need to do is to move the **TMK** shortcut icon you created on your desktop for easy access, by looking in the Hyperterminal Program Box (you may need to widen the box to see the icon hiding). Point your mouse to the **TMK** icon name and hold down your left mouse button and drag the icon out to your desktop and then release your left mouse button.
11. Once you are ready to dial in, double click on the telephone icon or hit **DIAL** if you are in the connect screen. When you are **CONNECTED**, you will get a screen looks like the one below.

A menu will be provided to allow you to access: REsearch™TMK, BUS (Business Registration), and LIC (Professional / Vocational licensing information). Simply select the service you wish to use.

#### *Additional Points about Hyper Terminal*

Key points: \*Refer to your Hyperterminal HELP manual for complete details. Hyperterminal is a Microsoft Windows 95 program.

1. In Hyperterminal you have the ability to use your mouse to click /drag / and block what you want printed.
2. When you hit the PRINT icon or File / PRINT, Hyperterminal's buffer will print the last 500 lines of data. We suggest you click / drag / and block the items you want printed. If you plan on doing a large run with a lot of data, elect to use the CAPTURE TO PRINTER OPTION. To do this, click on **TRANSFER, CAPTURE TO PRINTER** To send items to the printer as it is scrolling. To turn off this option, go back to **TRANSFER, CAPTURE TO PRINTER** and click on it to turn it off.
3. Capture alternative: To Capture to a FILE, go to **TRANSFER, CAPTURE TEXT**. Name the file, click **START**. \*Remember to go back to **TRANSFER, CAPTURE TEXT** and **STOP** capturing when you have downloaded your report.

**If you are NOT using Windows 95, and are using  
Versions 3.1 or are on a MacIntosh, configure your communication software  
to the following:**

**Set your communication software to reflect these parameters:  
8 Data bits, 1 Stop Bit, NONE Parity, Full Duplex, Echo None  
Terminal Emulation: VT 100 or higher**

<b>Dialup numbers:</b>	<b>Oahu 441-0001</b>	<b>Maui</b>	<b>442-0001</b>
	<b>Kauai 246-2800</b>	<b>Big Island</b>	<b>934-9058 / 443-0001</b>

Dial into the system...

When you hear the handshake (high low tones) and CONNECT, you will get a screen that looks like the one below.
